

## Convert-A-Mill Model 860C

Shown with Optional Equipment

Two machines in one! The Wells-Index Model 860 C Convert-A-Mill cost approximately 20% less than two separate machines and requires half the floor space.

The 860C converts in less than 5 minutes from horizontal to vertical (or vice versa) and simultaneously does vertical and horizontal milling with stub arbors.

The heavy-duty horizontal features all-gear positive drive, with high-inertia flywheel, 3 H.P. variable speed drive with direct lever control, and #40 MMT taper spindle equipped with drawbar. Also available are many of the standard features and optional equipment of the Model 847

## Model 860H

Same great features using the 860C model above, less the vertical head, which can be added later by bolting it on the overarm.
